AMENDMENTS TO THE SPECIFICATION:

Please amend the paragraph from page 13, line 16 to page 14, line 10, as follows:

Referring to Fig. 5, another embodiment of a GUI for a composite document editor 112 is shown. This embodiment includes multiple display areas 114, 116, 118, and 120 ~~114 to 120~~ for displaying the separate subdocuments that are included within a composite document. Although only four display areas are shown, any number of display areas may be depicted at the same time. Each display area displays the contents of a separate subdocument. Together, the subdocuments make up a single composite document. A scroll bar control 122 is provided for scrolling through the various subdocuments. For example, clicking on the top 124 of scroll bar 122 moves display 116 into the position currently occupied by display 114, display 118 into the position currently occupied by display 116, and display 120 into the position currently occupied by display 118. A new display (not shown) is then moved into the position currently occupied by display 120.

Please replace the Abstract on page 29 with the following new Abstract:

A graphical user interface (GUI) is provided for editing a composite document made up of separate documents having an ordered relationship. The GUI includes an area for displaying the separate documents, a control for use in selecting the separate documents for display in accordance with the ordered relationship, and an option to display the separate documents conjoined and such that content of the separate documents is editable from the area.
